CYBER RISK

Organizations the world over struggle with how to properly manage and quantify their cyber risk. From the more traditional cyber breaches to more recently developed deep fakes and social engineering programs, the cyber landscape only continues to grow more complex.

Our approach encompasses a multi-faceted methodology, leveraging risk management techniques and risk transfer solutions coupled with training and technology partners. We build a comprehensive defense that evaluates and strengthens all the core components of best-in-class cyber risk management.

Cyber Risk Assessments

Evaluates an organization's overall cybersecurity framework, in conjunction with the organization's risk profile. This model helps to establish a baseline standard and develop an actionable roadmap for improvement.

Cyber Breach Response Plan

Works with organizations to develop tailored cyber response plans to effectively manage a potential cyber breach scenario.

Cyber Awareness Training

Provides a broad set of training platforms to stress test an organization's overall cyber preparedness as well as reinforce best-in-class cyber practices. Training ranges from customized tabletop exercises, online training modules, cyber siege simulations and scenario stress testing capabilities.

Third Party Cyber Risk Analysis

Intangible threats, such as cyber, reputational risk and supply chain or third-party relationships often go unmeasured because of their amorphous nature. Putting precise figures around Value@Risk, as well as correlations and dependencies, can help improve business continuity planning and correct hedging and recovery strategies. Working closely with clients, we work to establish standardized controls and management processes that enable organizations to effectively reduce cyber supply chain risks.

Enterprise Value @Risk

All too often, risk management approaches falter on their inability to offer precise measures of financial, economic or operational business impacts. Our Enterprise Value@Risk measures remove the ambiguity from intangible risks and emerging threats, like cyber risk, among others.

Cyber Risk Transfer

Our team has extensive knowledge and capabilities to develop unique cyber insurance and risk transfer programs. While most traditional cyber insurance programs focus on a one-size-fits-all model, we work with clients to develop customized solutions that address their most pressing concerns. From stand alone cyber insurance and breach response programs, to intellectual property and catastrophic loss programs, our team works to develop the right solution for each client.
